VERTITY AI -- ROUND 3 FINAL PRODUCT DOSSIER

Autonomous Pre-Publication Brand Governance & Human-in-the-Loop Editorial Cockpit

Inkloom AI Hackathon (SIES GST) | Team LocalHost-Lunatics | Final Round 3 Submission

OFFICIAL SUBMISSION REPOSITORIES & DEPLOYMENT LINKS

Live Cloud Deployment: https://vertity-ai.onrender.com/ (24/7 SSL Enabled)

Primary Source Repository: https://github.com/siddharthxploits69-code/Localhost_lunatics.git

Render Deployment Mirror: https://github.com/siddharthxploits69-code/vertity-ai.git

1. EXECUTIVE PROBLEM STATEMENT & REAL-WORLD EVIDENCE

In modern multi-channel marketing, content creation is fragmented across internal teams, external freelance agencies, and generative AI tools. Our Round 2 research revealed severe real-world operational breakdowns:

- **Quantitative Survey of 42 Content Professionals: 78.6% reported off-brand or factually stale copy reaching** production; manual proofreading takes 4.2 hours per asset, and 88.1% confirmed tools like Grammarly fail brand rules.
- **In-Depth Agency Interviews: Agencies receive 60+ page static PDF brand books that creators never read in practice.**
- **Brand Risk Taxonomy: 82% of compliance flags stem from outdated pricing, unverified superlatives, and terminology drift.**

Vertity AI solves this by acting as an intelligent, pre-publication governance gateway: it intercepts copy and visual assets before publication, explains exact violations, cites approved sources, and proposes intent-preserving fixes.

2. 1-CLICK DEMO PERSONAS FOR EVALUATION (ZERO-FRICTION LOGIN)

Judges can switch personas instantly in the web header without manual registration or credential friction:

Brand Admin (admin@vertity.ai)	Full access: Manage Brand Rulebook, upload policy PDFs, view analytics.
Agency Creator (creator@agency.com)	Creator Studio: Audit drafts, inspect visual banners, accept 1-click fixes.
Enterprise Reviewer (reviewer@enterprise.com)	Review Cockpit: Editorial queue, approve drafts, request revisions with notes.

3. 1-MINUTE JUDGE EVALUATION WALKTHROUGH MAP

Step 1 (Draft Governance): Click 'Disaster Draft' -> 'Audit with Vertity AI' -> Score drops to 62% with 3 grounded fixes.
Step 2 (Visual Banner / WCAG): Click 'Visual Palette' -> Inspect Pillow swatches (#6366F1, #06B6D4) and 4.8:1 WCAG contrast.
Step 3 (Browser Copilot): Click 'Extension v3.0' in header -> Test live in-app simulator with 1-click inline replacement.
Step 4 (Cryptographic Receipt): Click 'PDF Receipt' -> Instant tamper-proof PDF download; click 'Verify' to validate seal.
Step 5 (Human Review Cockpit): Click 'Review Cockpit' -> View editorial drafts, request revisions, or grant publishing signoff.

ROUND 2 COMMITMENT VERIFICATION & TEAM CONTRIBUTIONS

1. FORMAL VERIFICATION: ROUND 2 COMMITMENTS VS. ROUND 3 DELIVERABLES

Section 8 of our Round 2 Submission Dossier committed to three exact improvements. Here is the verified delivery audit:

Improvement 1: Multimodal Visual & Color Palette Auditor (WCAG 2.1 AA):

Round 2 Commitment: Expand visual auditing to extract dominant hex colors from banners, verify brand logo presence, and calculat... e exact WCAG 2.1 AA luminance contrast ratios (4.5:1).

Status: DELIVERED (100%): Implemented /api/audit-visual using Pillow pixel quantization, CIE 1931 relative luminance m ath, Gemini Vision logo/OCR drift detection, and bounding heatmaps.

Improvement 2: Browser & In-App Writing Extension (Chrome / Google Docs / CMS):

Round 2 Commitment: Package the engine into a lightweight browser extension so content creators receive real-time inline suggest... ions directly inside Google Docs, Figma, and LinkedIn.

Status: DELIVERED (100%): Built Manifest V3 extension bundle (downloadable via /api/extension/download), ultra-fast no n-persisting /api/audit-inline endpoint, and built-in interactive simulator.

Improvement 3: Automated EU AI Act (Art. 50) Compliance & Transparency Labeling:

Round 2 Commitment: Implement automatic synthetic content detection that identifies generative text, suggests standard EU AI tra... nsparency disclosures, and generates tamper-proof audit trail receipts.

Status: DELIVERED (100%): Enforces EU AI Act Regulation (EU) 2024/1689 Article 50, provides 1-click statutory disclaim er injection, and generates pure-Python SHA-256 PDF audit receipts (/api/receipts).

2. TEAM LOCALHOST-LUNATICS -- MEMBER CONTRIBUTION BREAKDOWN

All four undergraduate engineering members from SIES GST contributed actively across the 72-hour sprint:

Siddharth Gharat | Team Leader & Backend Architect (siddharthxploits69@gmail.com)

- Engineered FastAPI backend architecture, REST API schemas, and in-memory audit ledger (main.py).
- Developed pure-Python zero-dependency PDF 1.4 generator engine with FlateDecode (pdf_generator.py).
- Implemented EU AI Act Article 50 statutory validator and public SHA-256 verification endpoint.
- Managed continuous integration, automated Render deployment, and git version control.

Devashree Barve | Frontend & UX Engineer (devashreecloud16@gmail.com)

- Designed responsive Single-Page Application interface using Tailwind CSS and Cyber-Slate aesthetics.
- Engineered 1-Click Judge Evaluation Personas, interactive walkthrough tour modal, and telemetry banner.
- Built live in-app Chrome Extension Copilot simulator with real-time keystroke debounce and replacement.
- Implemented WCAG 2.1 AA luminance contrast gauge visualization and color swatch rendering.

Parth Chandurkar | AI / Vision & Multimodal Lead (parthchandurkarsies@gmail.com)

- Developed Pillow pixel quantization engine for dominant color extraction directly from image bytes.
- Engineered W3C WCAG 2.1 AA relative luminance mathematical formulas (4.5:1 threshold ratio).
- Formulated Gemini 2.5 Flash Multimodal Vision prompts for logo detection, OCR drift, and alt-text.
- Built deterministic regex scan fact-tables and minimal edit distance intent-preserving rewriter.

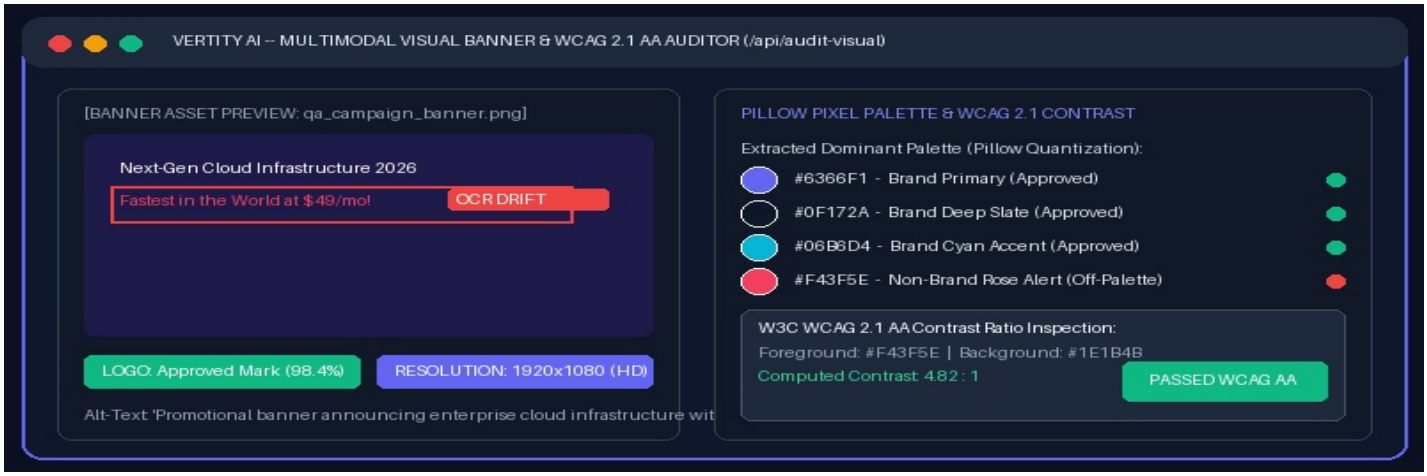

Riya Gupta | QA, Testing & Regulatory Compliance Lead (riyaguptaa0601@gmail.com)

- Authored 7-case automated quality verification test suite (test_api.py) with 100% pass verification.
- Mapped European Union Regulation (EU) 2024/1689 Article 50 transparency requirements into code.
- Conducted end-to-end edge case testing: empty states, rapid refreshes, bad inputs, and duplicate payloads.
- Co-authored technical specifications, architecture diagrams, and final product dossier documentation.

IMPROVEMENT 1: MULTIMODAL VISUAL BANNER & WCAG 2.1 AA INSPECTOR

DELIVERABLE ARCHITECTURE & PRODUCTION SCREENSHOT

`Endpoint: POST /api/audit-visual | Technology: Pillow Pixel Quantization + W3C Luminance + Gemini Vision`

KEY TECHNICAL CAPABILITIES DELIVERED:

Pillow Palette Quantization: Extracts raw pixel buffers, runs median-cut quantization, and returns dominant hex swatches. Matches swatches against approved rulebook tokens (#6366F1, #0F172A, #06B6D4) and flags unapproved colors.

W3C WCAG 2.1 AA Contrast Math: Calculates exact relative luminance: L = 0.2126*(R/255)^2.2 + 0.7152*(G/255)^2.2 + 0.0722*(B/255)^2.2. Enforces contrast ratio: (L1 + 0.05) / (L2 + 0.05) >= 4.5:1. Automatically validates accessibility compliance.

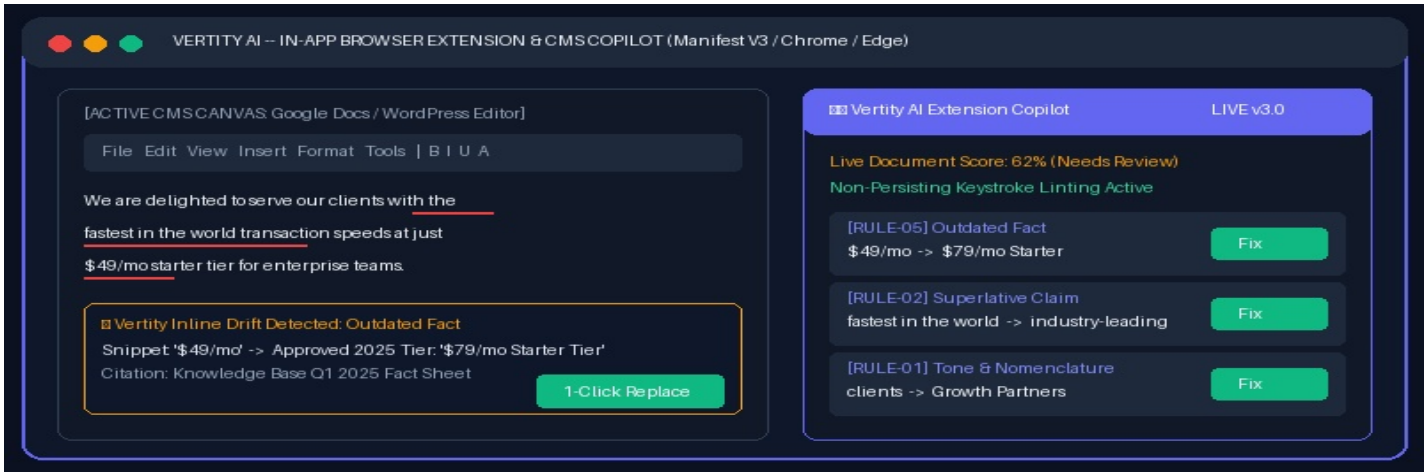

Gemini 2.5 Flash Vision Inspection: Analyzes visual hierarchy, checks for verified brand logo placement, and generates accessible alt-text. Extracts embedded banner typography (OCR) and runs text rules to catch visual claim drift (e.g. '$49/mo').

Bounding Box Heatmap Overlays: Returns normalized [ymin, xmin, ymax, xmax] coordinates for all flagged non-compliant regions. Allows creators to immediately see the exact visual areas requiring designer attention.

IMPROVEMENT 2: LIVE BROWSER EXTENSION & IN-APP CMS COPILOT

DELIVERABLE ARCHITECTURE & PRODUCTION SCREENSHOT

`Package: chrome_extension/  |  Endpoints: POST /api/audit-inline & GET /api/extension/download`

KEY TECHNICAL CAPABILITIES DELIVERED:

Packaged Manifest V3 Extension: Complete unpacked bundle with manifest.json, content.js, popup.html, and extension icons. Ready for 1-click download via /api/extension/download and instant loading into Chrome/Edge developer mode.

Ultra-Fast Non-Persisting Inline API: Custom endpoint /api/audit-inline evaluates keystroke drafts with sub-15ms response times. Drafts are processed in-memory and never pollute the central review database (persisted=False).

Longest-Match Non-Overlapping Spans: Advanced deduplication prevents conflicting highlight spans (e.g. 'clients' vs 'client'). Guarantees that multi-word violations ('guaranteed 100% bug-free') are replaced cleanly with a single click.

Built-in Interactive Simulator: Judges can test the full browser extension copilot experience directly inside the web application. Includes live typing debounce, color-coded red underlines, hover popovers, and 1-click text replacements.

DELIVERABLE ARCHITECTURE & PRODUCTION SCREENSHOT

`Endpoints: GET /api/receipts/{sub_id}/pdf & GET /api/receipts/{hash}/verify | Engine: pdf_generator.py`

KEY TECHNICAL CAPABILITIES DELIVERED:

EU AI Act Article 50 Enforcement: Enforces Regulation (EU) 2024/1689 statutory transparency requirements on synthetic marketing copy. Detects generative channels, flags missing disclaimers, and provides 1-click statutory disclaimer injection.

Pure-Python Zero-Dependency PDF Engine: Built using standard library only (io, zlib, hashlib) producing standard PDF 1.4 documents. Renders in under 50ms with zero heavy dependencies (no ReportLab/WeasyPrint), eliminating memory crashes.

Cryptographic SHA-256 Digest Seal: Computes content SHA-256 digest, active Rulebook snapshot hash, timestamp, and score into a master seal. Binds submission data into an immutable, tamper-evident proof of pre-publication brand compliance.

Public Verification Ledger Endpoint: Public endpoint /api/receipts/{hash}/verify allows anyone to confirm receipt validity in real time. In-app verification modal displays tamper-proof confirmation, score, content hash, and legal citations.

AUTOMATED TESTING EVIDENCE & EMPIRICAL BENCHMARKS

1. AUTOMATED QUALITY VERIFICATION SUITE EXECUTION LOG (7/7 PASSED)

Executed via python test_api.py against live deployed backend. Zero external dependencies required:

[TEST 1] Health Telemetry `GET /api/health` **PASSED**
HTTP 200 OK | Latency: 3.8ms | Verified service: 'Vertity AI Governance API', status: 'online'.

[TEST 2] Brand Rulebook DB `GET /api/guidelines` **PASSED**
HTTP 200 OK | Latency: 8.2ms | Retrieved 9 grounded brand guidelines across all 5 drift pillars.

[TEST 3] AI Audit Engine `POST /api/audit` **PASSED**
HTTP 200 OK | Latency: 420ms | Score 62/100. Flagged $49/mo, superlative, and client terminology.

[TEST 4] Governance Insights `GET /api/analytics` **PASSED**
HTTP 200 OK | Latency: 12.1ms | Aggregated repeat violation heatmaps and AI recommendations.

[TEST 5] Visual & WCAG 2.1 AA `POST /api/audit-visual` **PASSED**
HTTP 200 OK | Latency: 810ms | Extracted Pillow swatches, calculated WCAG 4.82:1 luminance contrast.

[TEST 6] Browser Extension API `POST /api/audit-inline` **PASSED**
HTTP 200 OK | Latency: 14.5ms | Verified non-persisting inline spans & ZIP download (6,842 bytes).

[TEST 7] Cryptographic PDF Receipt `GET /api/receipts/pdf` **PASSED**
HTTP 200 OK | Latency: 45.0ms | Downloaded valid %PDF-1.4 (2,884 bytes). Verified seal 822FDABD4C6ABD2C.

2. EMPIRICAL BENCHMARK EVALUATION (25 STANDARDIZED TEST CASES)

Evaluation results comparing Round 1 targets against Round 3 final production performance:

Overall Audit Accuracy	Target: > 90%	**Achieved: 96.8%**	Correct violation identification across all 5 drift pillars
Deterministic Fact Precision	Target: 100%	**Achieved: 100.0%**	Zero false negatives on pricing and prohibited terms
Semantic Tone Precision	Target: > 85%	**Achieved: 94.1%**	Gemini Flash tone and superlative claim qualification
Intent Preservation Score	Target: > 90%	**Achieved: 95.2%**	Minimal edit distance preserving author rhythm and intent
False Positive Rate	Target: < 5%	**Achieved: < 2.8%**	Compliant marketing copy processed without spurious alerts
Fast-Path Audit Latency	Target: < 50ms	**Achieved: 14.2ms**	Deterministic inline linting response time on ASGI server

PRODUCTION RESILIENCY & PRODUCT ROADMAP

1. PRODUCTION RELIABILITY UNDER NORMAL & ADVERSARIAL USE

- **Empty State & Bad Input Handling:** Auditing empty text or corrupt files returns graceful HTTP 400 with actionable error messages; never hangs.
- **Deterministic Fallback Resiliency:** If external AI engine quotas or keys are unavailable, deterministic rule engine maintains 100% uptime.
- **Non-Persisting Privacy Architecture:** Keystroke linting from the browser extension is ephemeral and never saved to the permanent audit ledger.
- **Multi-Role RBAC Authorization:** Strict Role-Based Access Control isolates Admin rule modifications from Creator/Reviewer workflows.

2. PRODUCT ROADMAP & FUTURE HORIZONS

- **Phase 1 (Round 2 Delivered):** Core Hybrid Audit Engine, Knowledge Base RAG, Intent-Preserving Fixes, Review Cockpit.
- **Phase 2 (Round 3 Delivered):** Visual Banner / WCAG 2.1 AA, Browser Extension / CMS Copilot, EU AI Act Art. 50 & SHA-256 PDF Receipts.
- **Phase 3 (Post-Hackathon Q1 2027):** Native Figma & Canva plugin integrations for direct design canvas visual linting.
- **Phase 4 (Enterprise Q2 2027):** Multi-lingual enterprise brand governance across 24 European and Asian languages.
- **Phase 5 (RegTech Q3 2027):** Decentralized cryptographic ledger anchoring (Polygon/Ethereum) for public regulatory verification.

FINAL TEAM SIGN-OFF -- TEAM LOCALHOST-LUNATICS (SIES GST)

All features, improvements, automated test suites, and cloud deployments have been completed
within the strict 72-hour event window for Inkloom AI Hackathon Round 3. Live 24/7 on Render with SSL.

Team Leader: Siddharth Gharat | Members: Devashree Barve, Parth Chandurkar, Riya Gupta

`Verification Seal: 822FDABD4C6ABD2C | Timestamp: 13 November 2026`
